

# Festive Gadget Gains

A data analysis project exploring gadget sales during festive seasons using Power BI and SQL Server

## **Presented by:**

Ms. Deokar Yogeshwari Subhash (Roll No-22)

Ms. Deshmukh Gauri Shamsundar (Roll No-24)

Ms. Dhavane Swarali Vilas (Roll No-27)

Mr. Gaikwad Swapnil Samadhan (Roll No-33)

**Guided by:** Ms. M.V.Nalawade

# Project Overview

## Data Analysis

Comprehensive analysis of gadget sales patterns during festive periods

## Technology Stack

Built using Power BI for visualization and SQL Server for data management

## Business Insights

Identify trends, demand patterns, and strategic opportunities

# Project Objectives

01

---

## Analyze Festive Sales Performance

Evaluate sales patterns during key festive periods

02

---

## Identify High-Demand Gadgets

Determine which products drive festive season revenue

03

---

## Study Discount Impact

Measure effectiveness of promotional offers and pricing strategies

04

---

## Analyze Regional Trends

Compare sales performance across different geographical areas

05

---

## Support Data-Driven Decisions

Provide actionable insights for strategic planning

# Power BI Desktop

Power BI Desktop is the primary tool for creating interactive data visualizations and comprehensive business reports.

## Key Features

- Connects to multiple data sources including Excel, SQL Server, and cloud services
- Advanced data modeling for complex relationships
- DAX calculations for custom metrics
- Interactive dashboards with drill-through capabilities

# Power BI Service

- **Cloud Platform**  
Hosts and shares dashboards securely in the cloud for enterprise-wide access
- **Collaboration**  
Enables team members to view, comment, and interact with reports in real-time
- **Real-Time Updates**  
Scheduled data refresh ensures dashboards display current information automatically
- **Data Security**  
Role-based access control and encryption protect sensitive business information

# Power Query Editor

## Data Preparation Tool

Power Query Editor transforms raw data into analysis-ready format through systematic cleaning and transformation.

## Essential Tasks

- Remove duplicate records to ensure data accuracy
- Handle missing values using appropriate imputation methods
- Format data types and standardize naming conventions
- Merge multiple data sources into unified tables

# DAX (Data Analysis Expressions)

## Formula Language

DAX is Power BI's powerful formula language for creating custom calculations and business logic

## Key Calculations

Total Sales: Sum all revenue across transactions

Profit Margin: Calculate percentage of revenue remaining after costs

Average Order Value: Determine typical purchase amount per transaction

## Advanced Analytics

Enables time intelligence, statistical analysis, and complex business metrics beyond basic aggregations

# Microsoft SQL Server

## Database Management

Enterprise-grade system for storing and managing large volumes of sales data efficiently

## Fast Querying

Optimized query processing ensures rapid data retrieval even with millions of records

## Data Security

Enterprise security features including encryption, authentication, and access control

## Scalability

Handles growing data volumes from seasonal sales without performance degradation

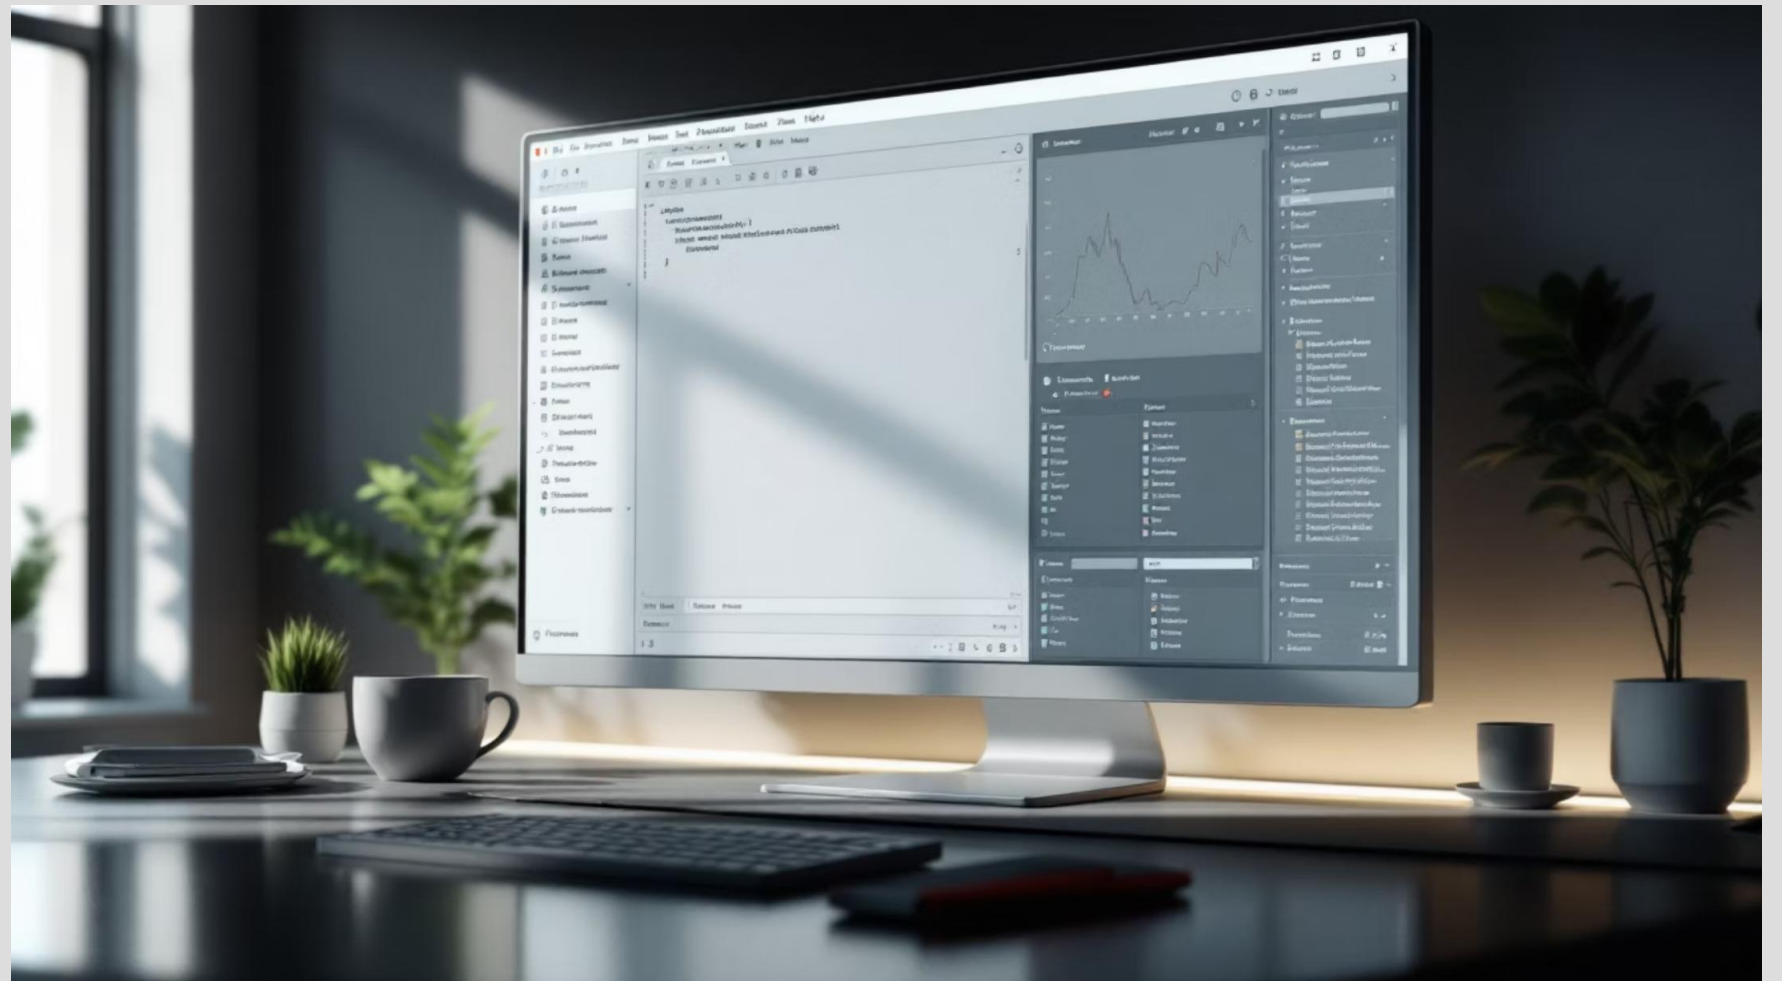

# SQL Server Management Studio (SSMS)

## Database Administration Tool

SSMS provides a comprehensive interface for managing SQL Server databases and executing complex operations.

## Core Features

- Query execution with syntax highlighting and debugging
- Database management including backup and restore operations
- Performance tuning through query optimization and indexing
- Security configuration and user permission management

# Software Requirements

## Power BI Desktop

Core visualization tool

## Power BI Service

## SQL Server

Database management

## SSMS

SQL Server Management Studio

## MS Excel

Data preparation

## Windows 10+

Operating system

# Hardware Requirements

## Processor

Intel or Ryzen 3 processor or higher

## RAM

Minimum 4GB for smooth operation

## Storage

At least 256GB capacity

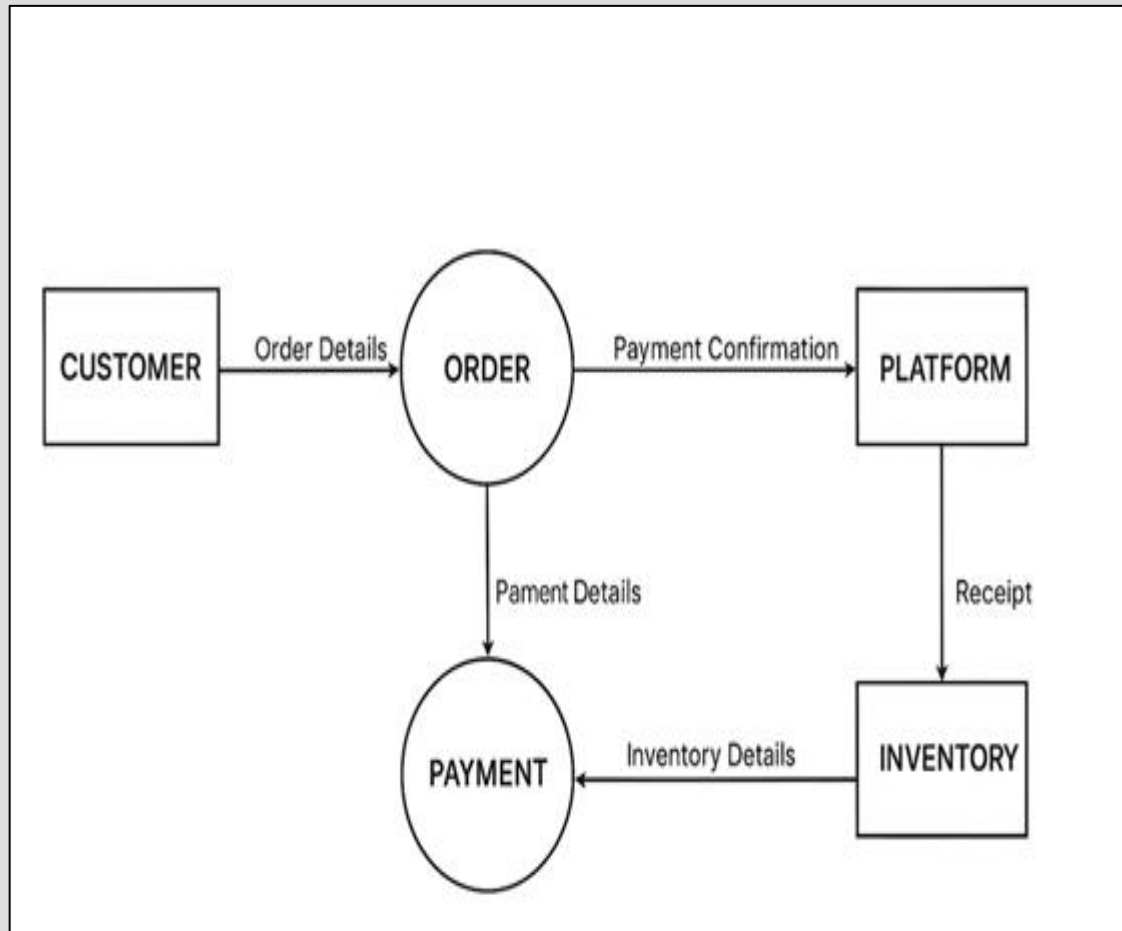

## Internet

Stable connection required

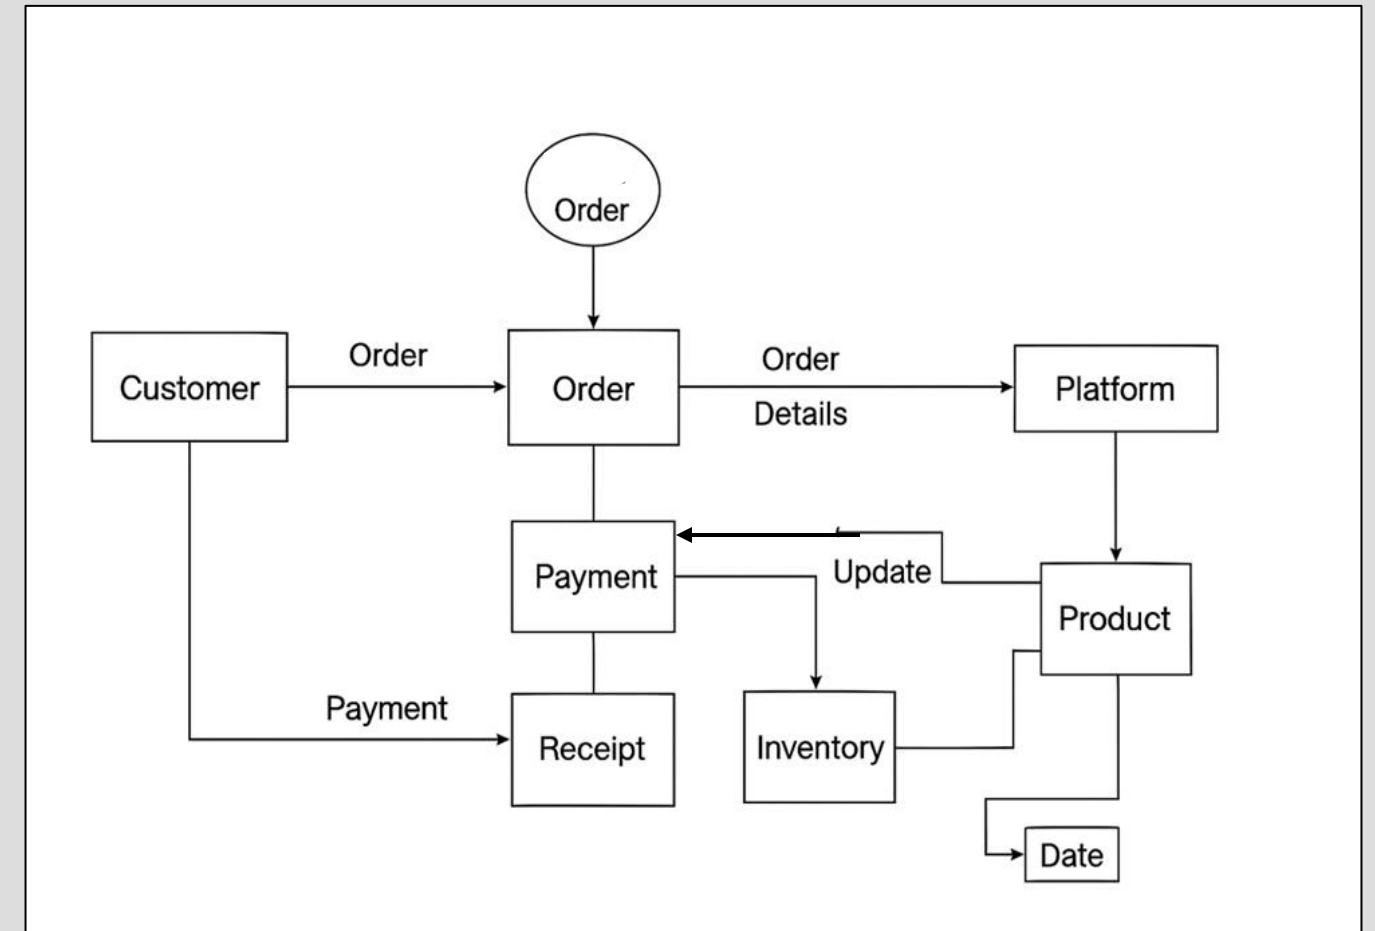

# Data Flow Diagram

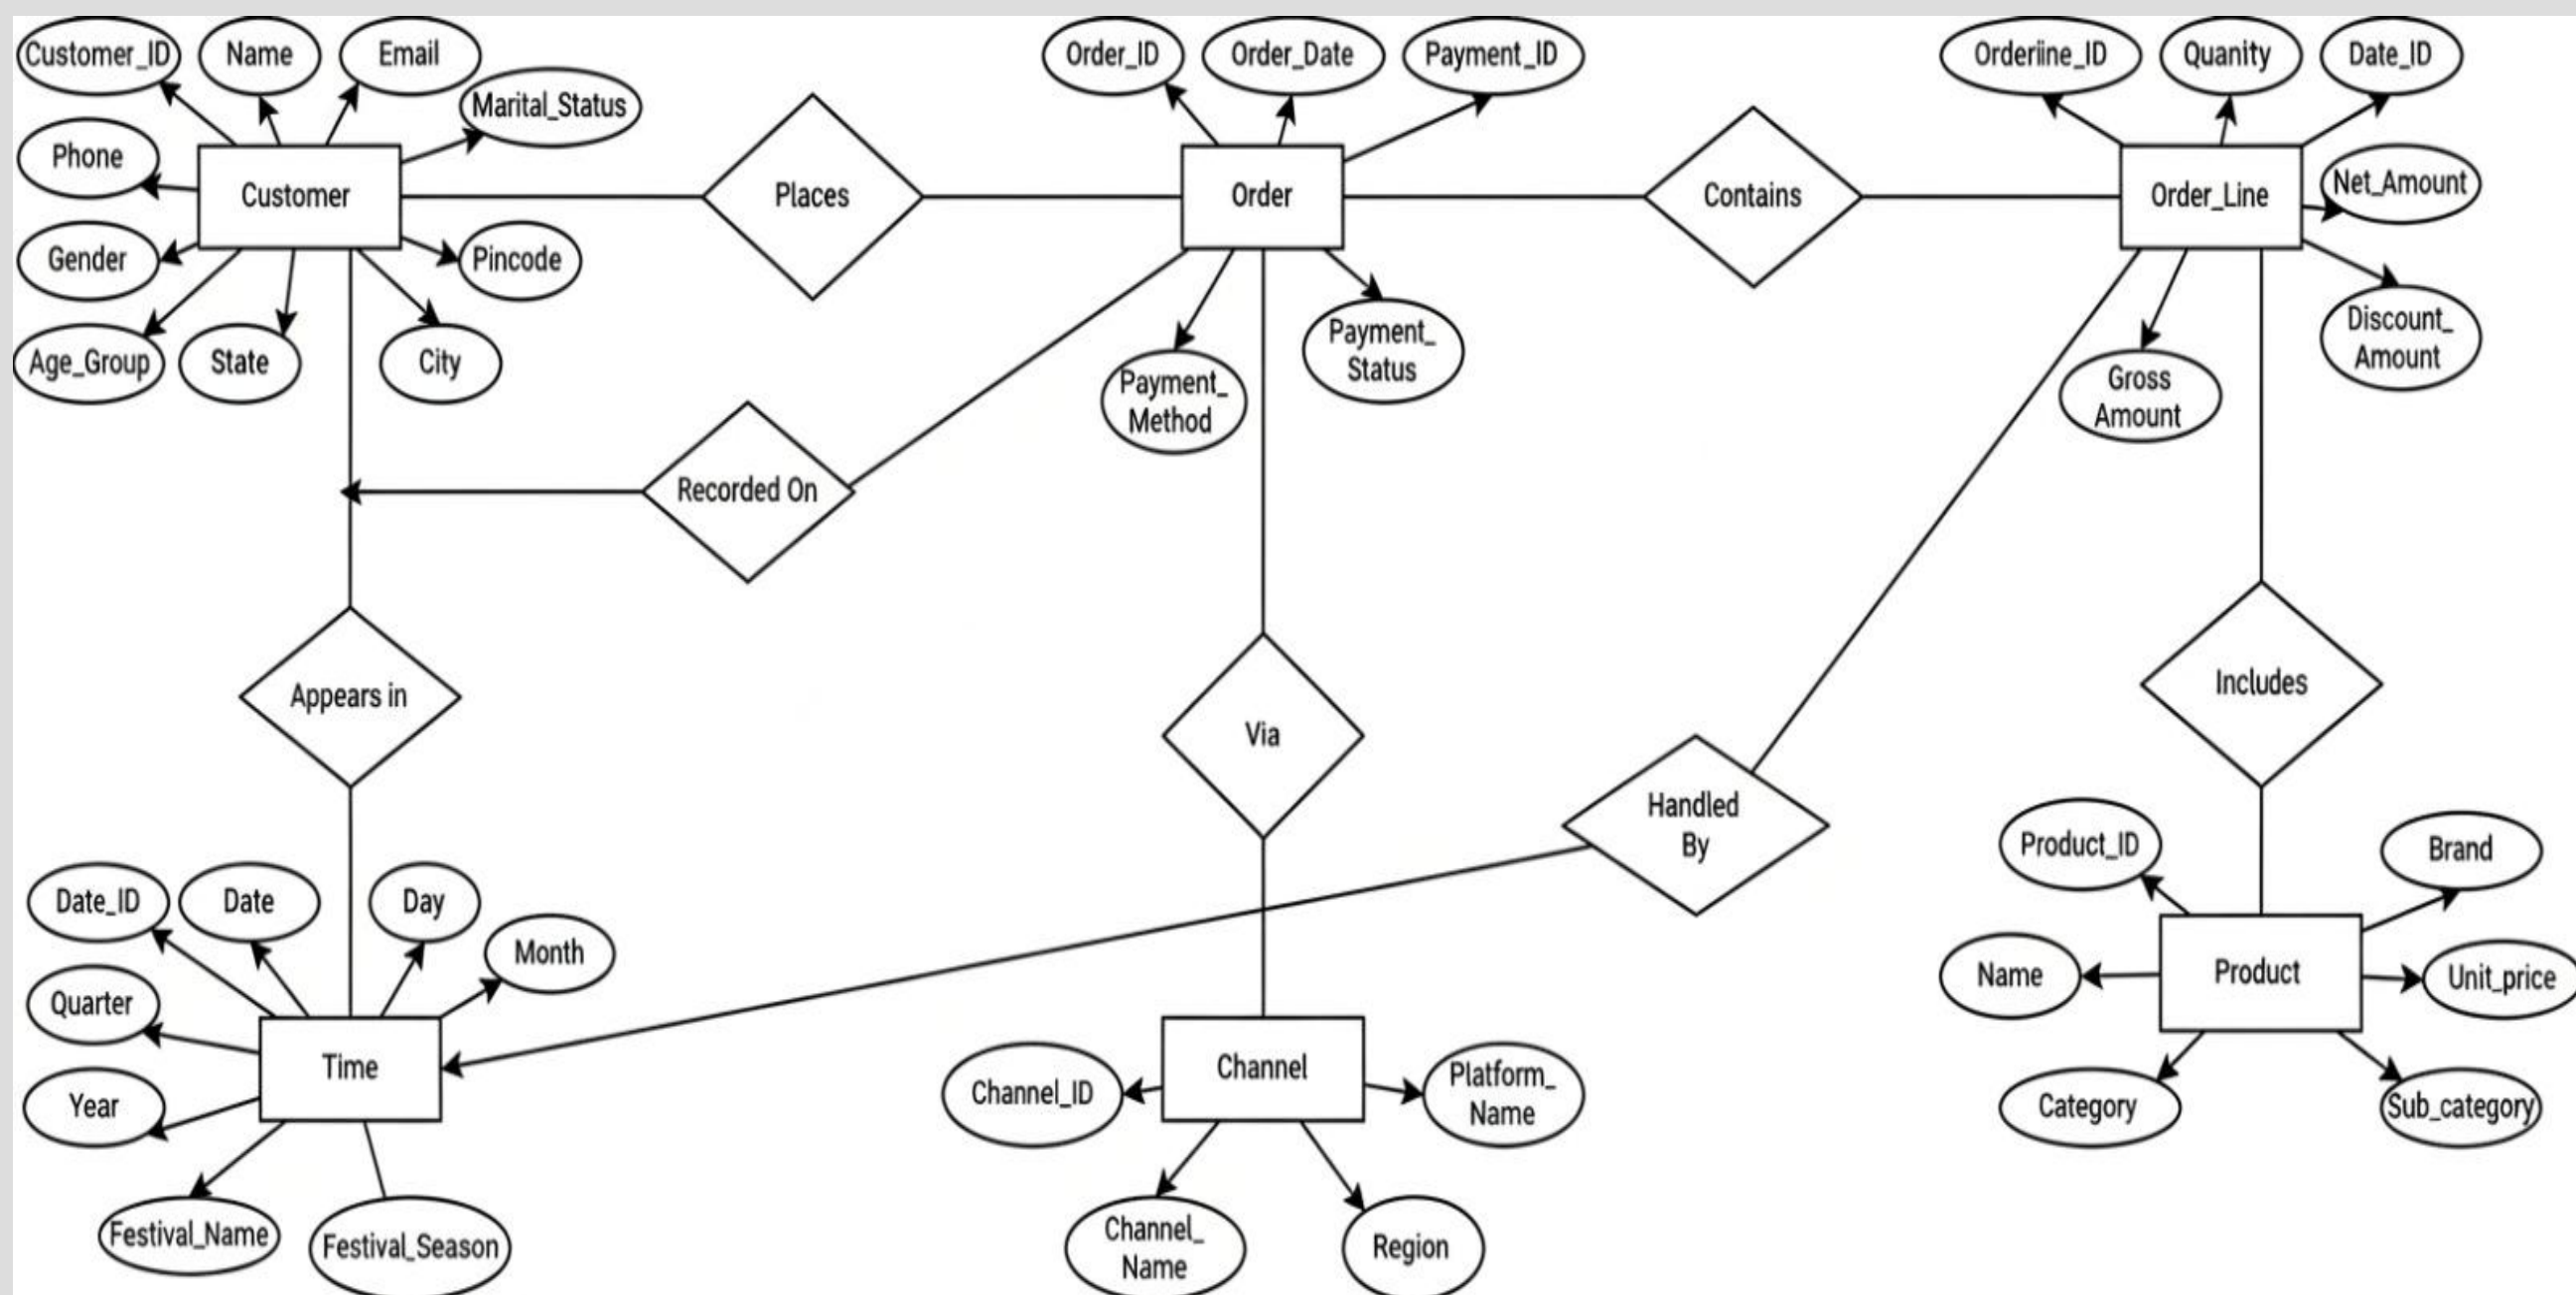

DFD Level-0

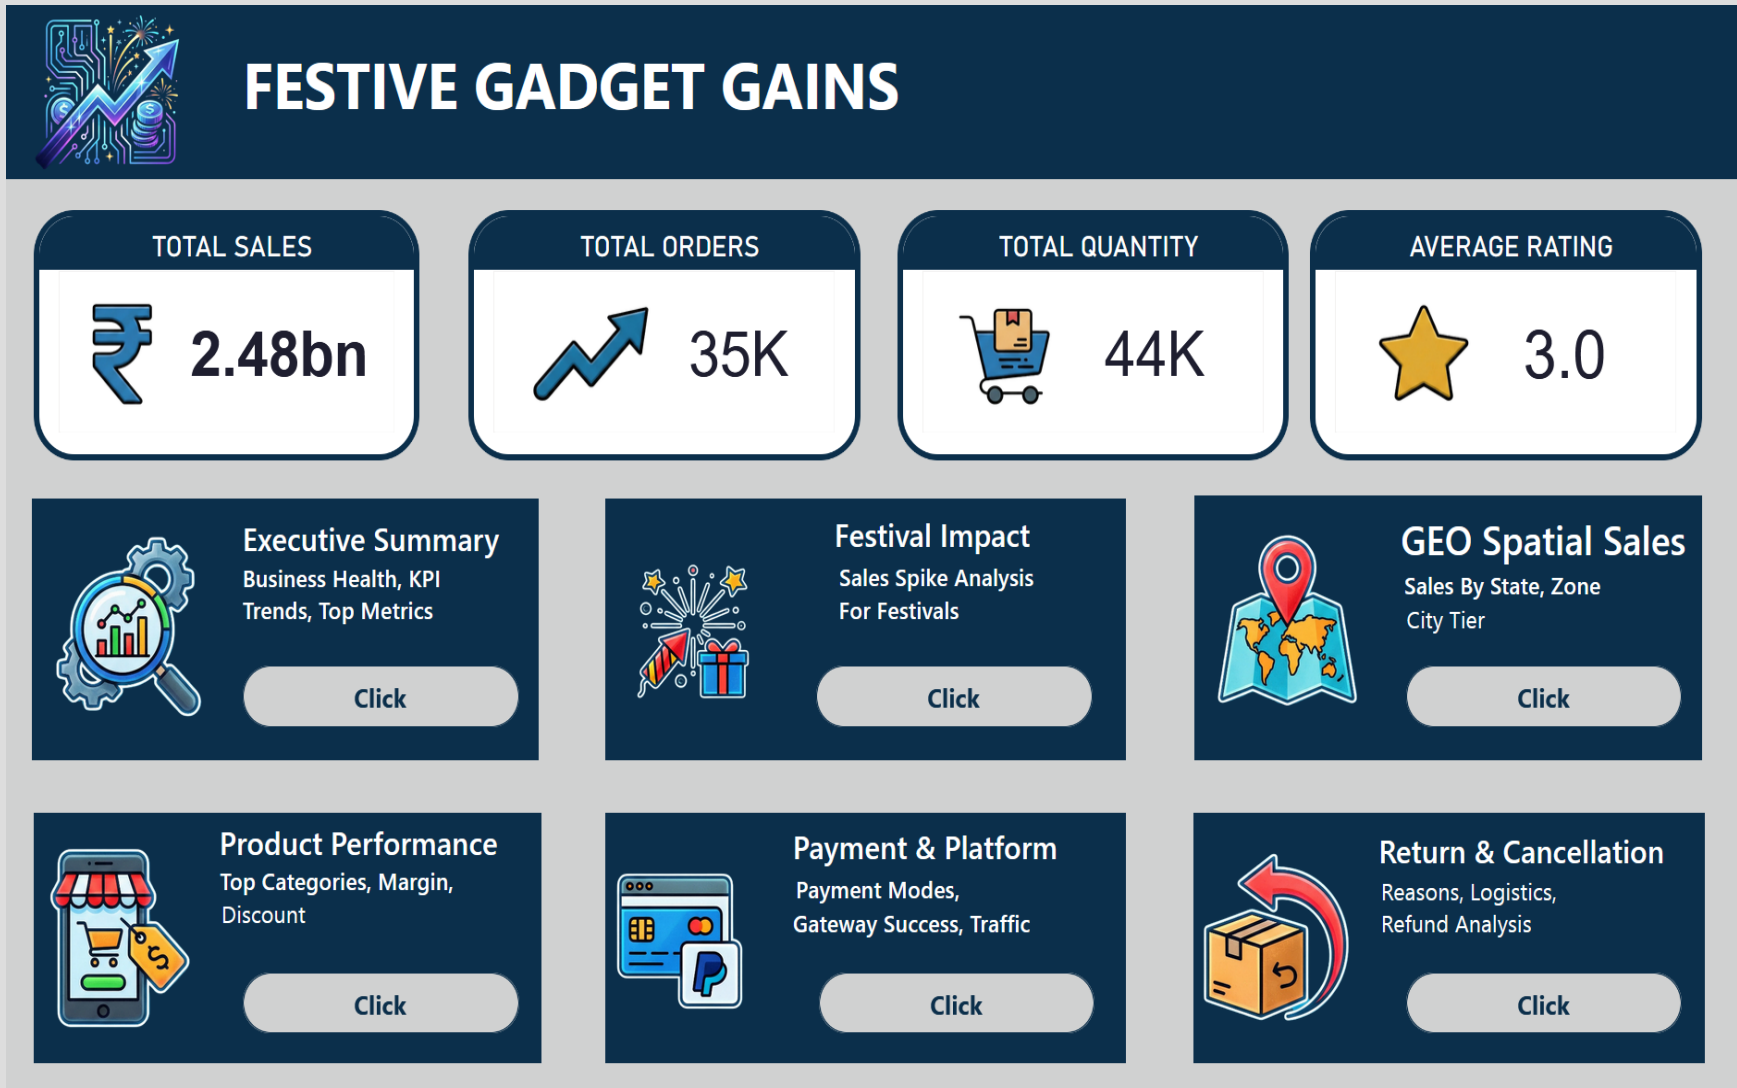

DFD Level-1

# Entity Relationship Diagram

# Dashboard Screenshots

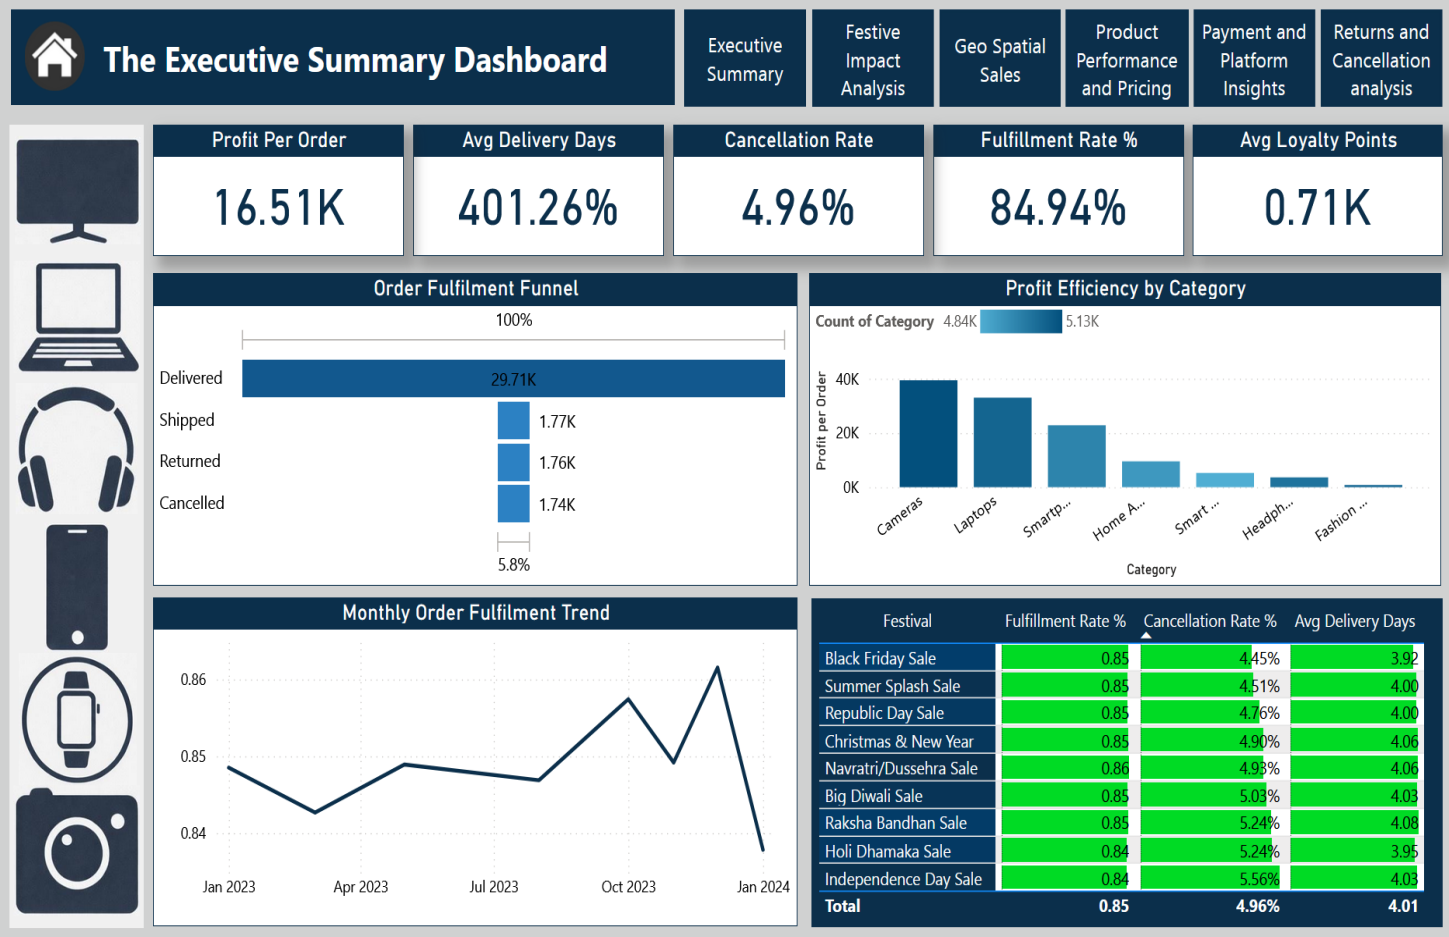

## Home Page

Overall Performance Insights

## Visualization Types

- Kpi Cards
- Buttons for Navigation

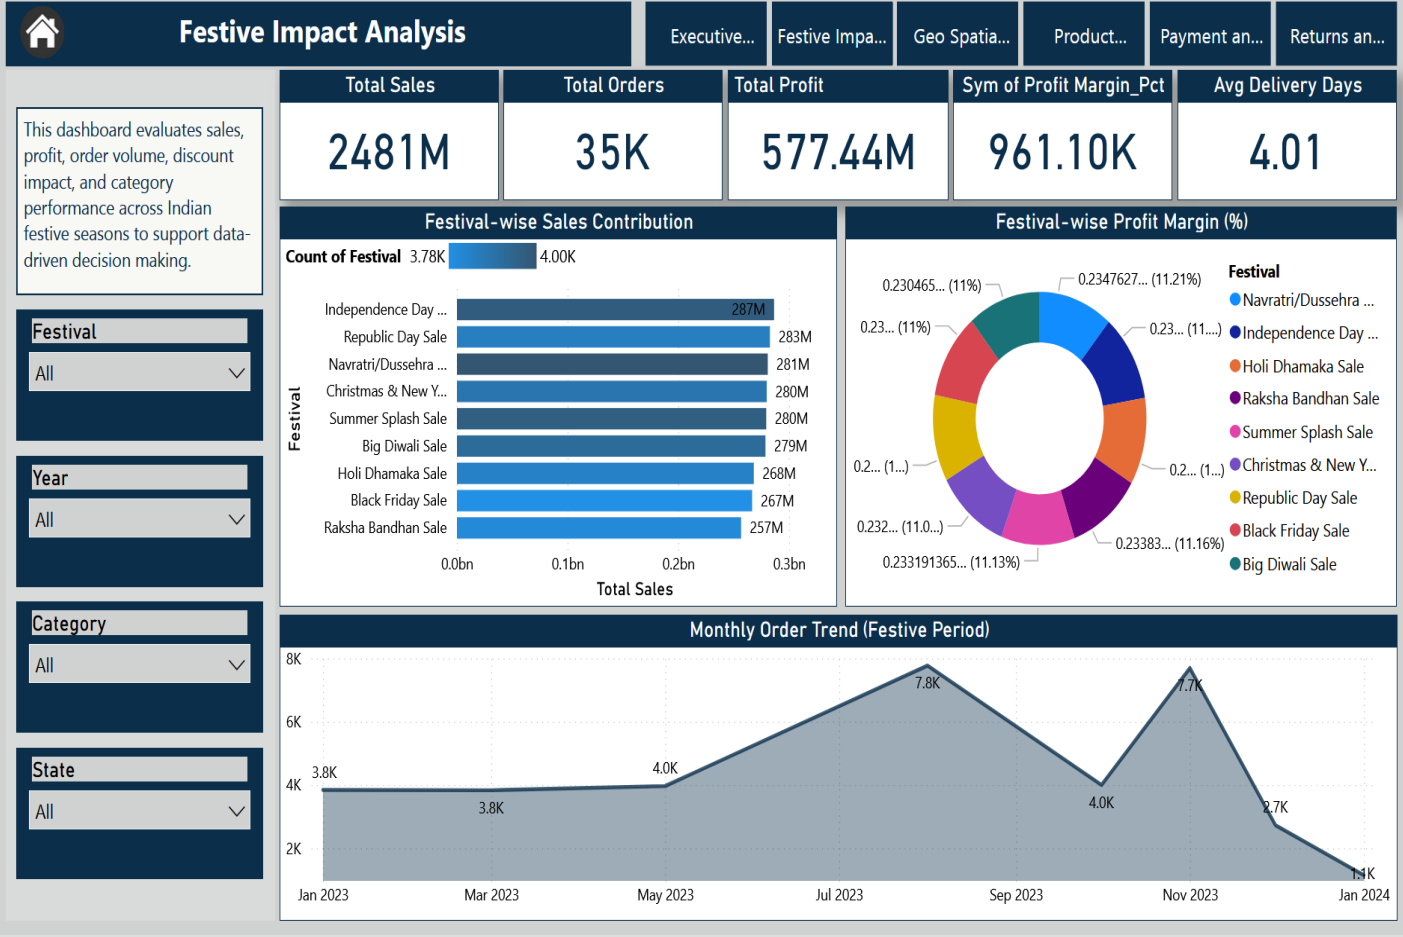

# Executive Summary

## Visualization Types

- Kpi Cards
- Bar Chart
- Line chart
- Funnel Chart
- Matrix Table

# FestiVe Impact Analysis

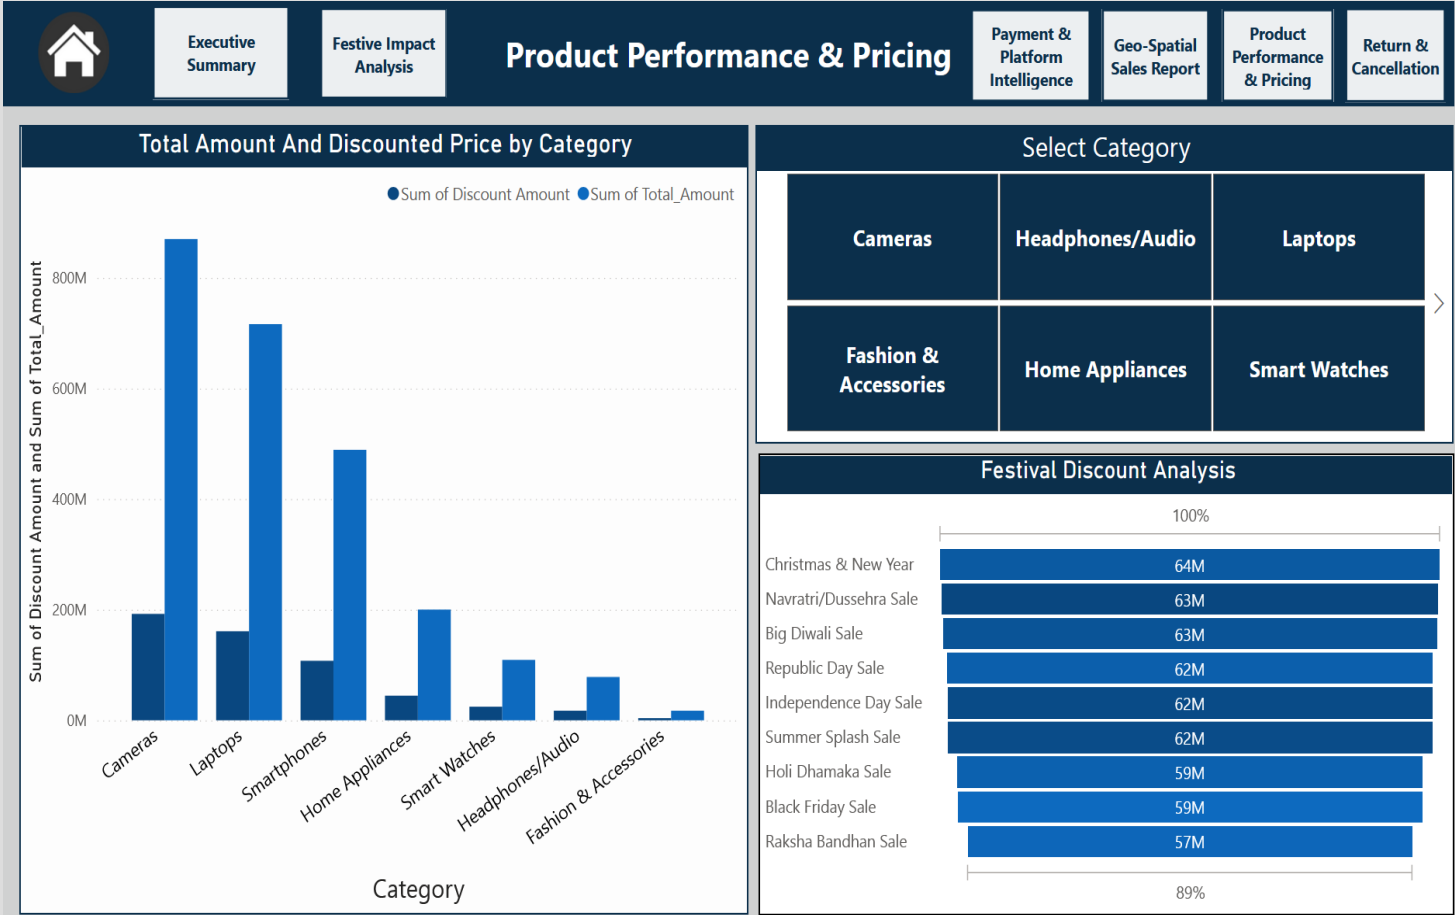

## Visualization Types

- Kpi Cards
- Column Chart
- Area Chart
- Donut Chart

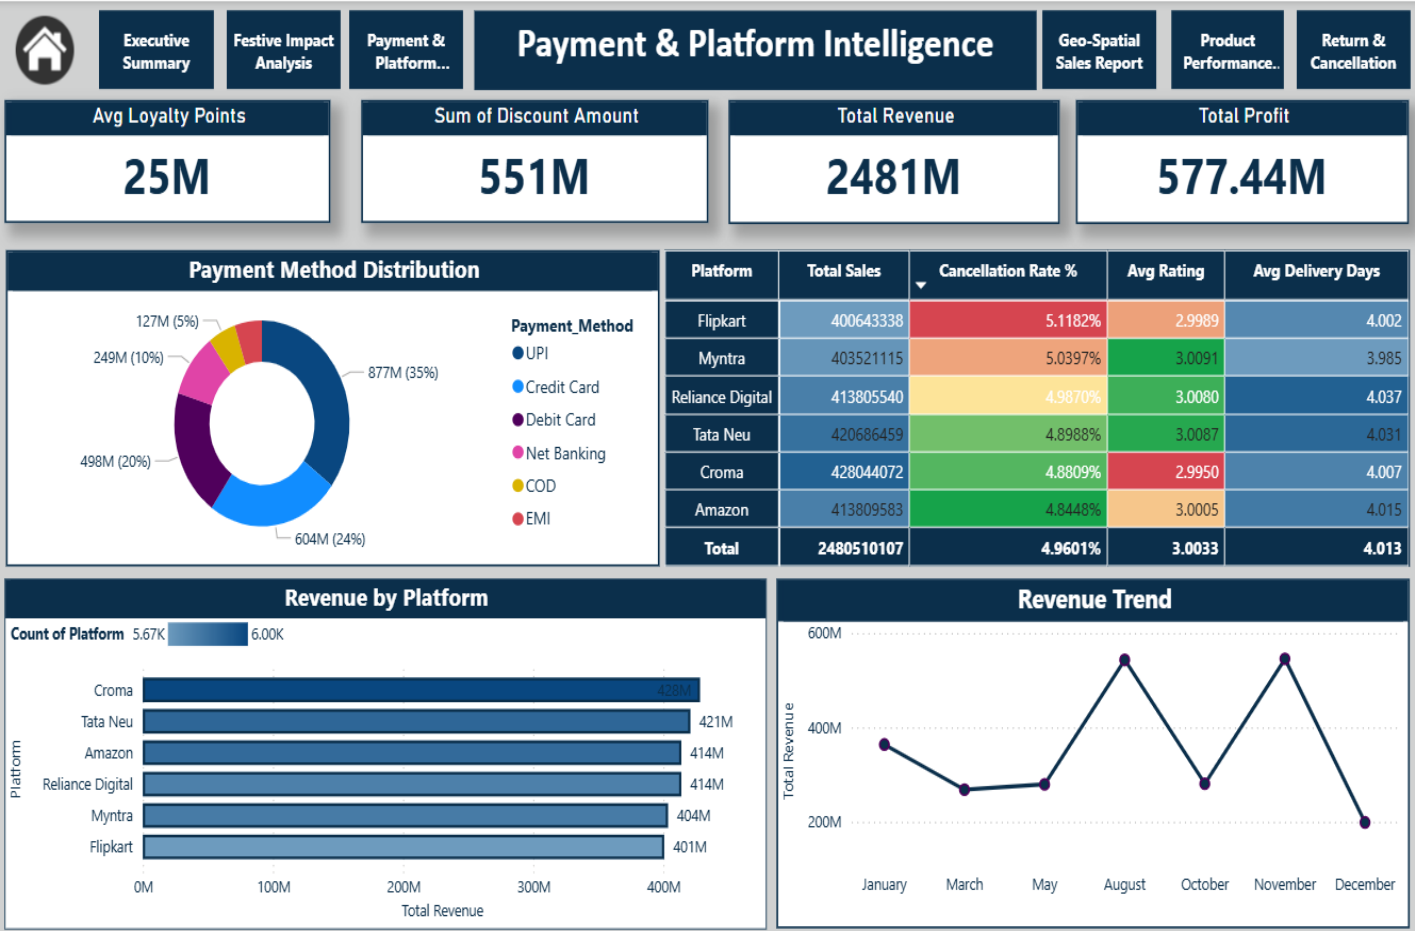

# Product Performance

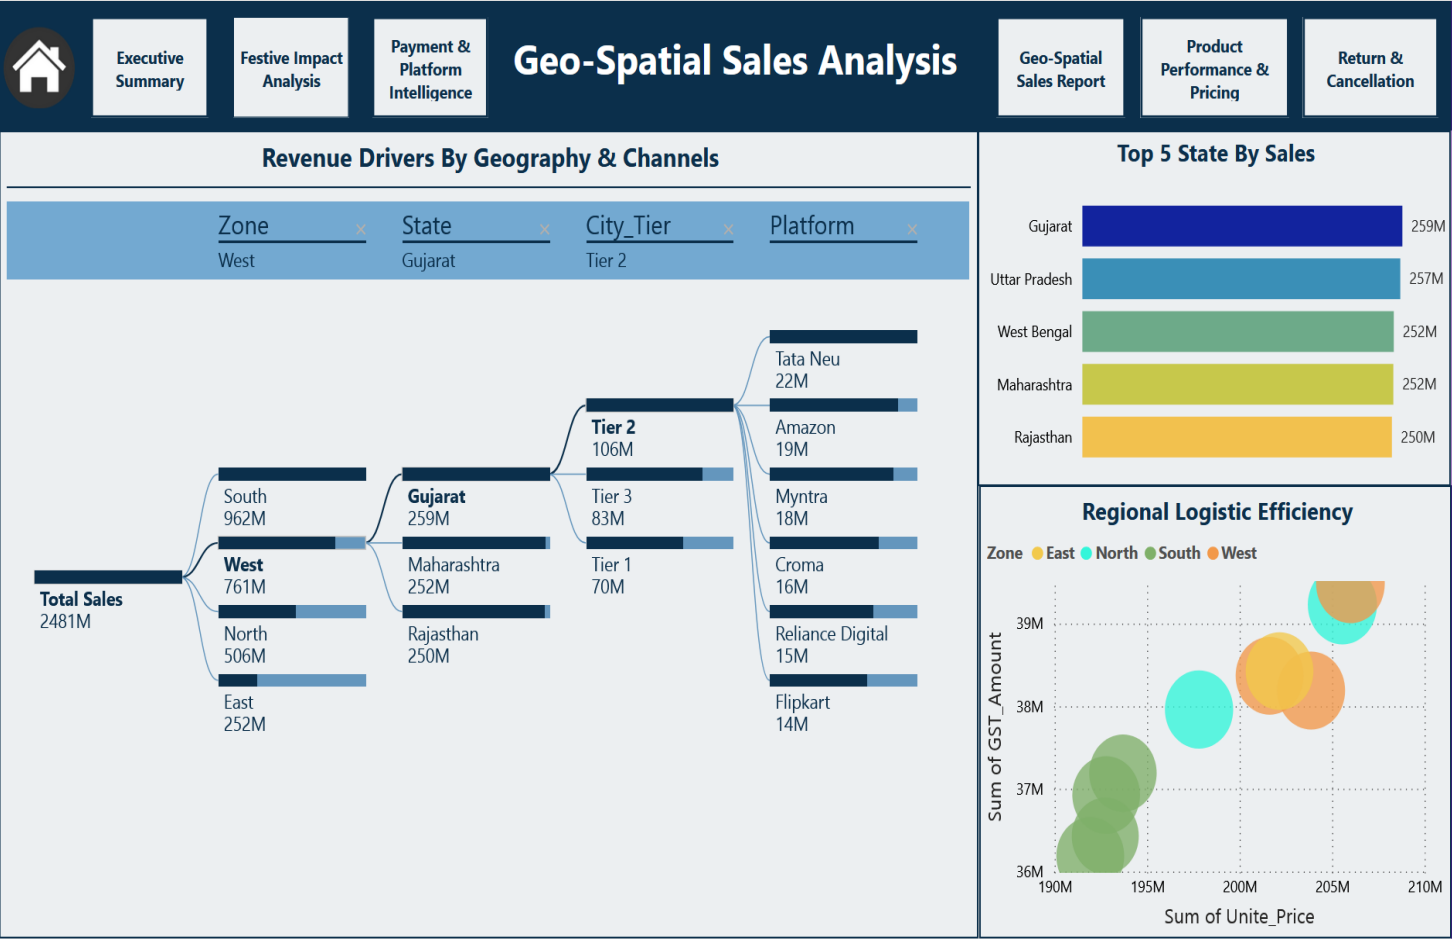

## Visualization Types

- Bar Chart
- Funnel Chart
- Slicer

# Payment and Platform

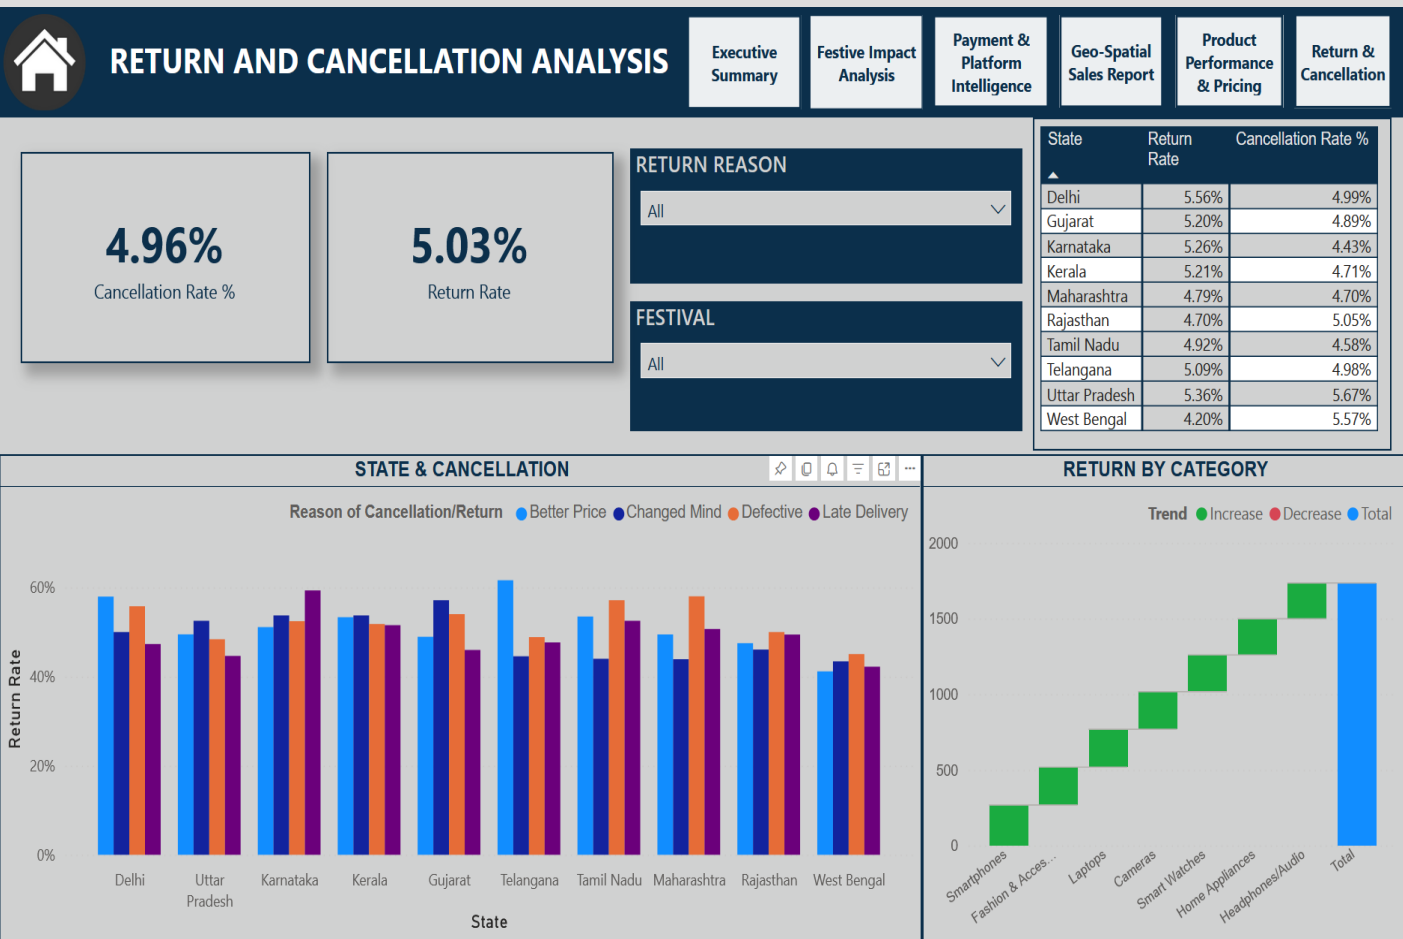

# Geo-Spatial Sales

## Visualization Types

- Horizontal Bar Chart
- Decomposition Tree
- Scatter Chart

# Return and Cancellation

## Visualization Types

- Kpi Cards
- Clustered Column Chart
- Waterfall Chart
- Matrix

# Future Scope

## AI/ML Integration

Machine learning capabilities

## Real-Time Analytics

Live data processing

## Mobile Dashboard

Enhanced mobile experience

## Predictive Forecasting

Sales predictions

# Conclusion

This project delivers actionable business insights through comprehensive data visualization.

## Sales Strategy

Optimize pricing and promotional tactics

## Inventory Planning

Improve stock management and forecasting

## Customer Understanding

Gain deeper insights into customer behavior

Enables data-driven decisions for improved business performance

# Bibliography

## Microsoft Power BI Documentation

Official guides and resources

## SQL Server Documentation

Database technical references

## Online Tutorials & Research Papers

Additional learning materials
